WPM
Optimised Line Array – Two-way, passive line array element

Features

• Ultra-compact line array
• Scalable resolution for advanced array control
• External, dedicated, multi-channel Class D amplification
• Industry-leading DISPLAY software interacts with DSP for highly-accurate results
• Fast, integral 3-point flying systems for up to 16 enclosures
• Side and rear handles for ease of handling and setting splay angles
• 100° horizontal constant directivity pattern control

Applications

• Touring sound reinforcement for small and medium-size venues
• Fixed installations in concert halls, theatres, ballrooms and HoW
• Sports stadium and arena installations
• Corporate AV events

The scalable resolution of WPM offers greatly improved coverage consistency and control compared to a standard line array and provides a flexible pathway to advanced array optimisation.

WPM is incredibly versatile. Its very small footprint and light weight make it the system of choice for smaller venues which require superb fidelity, coverage consistency and control from an ultra-compact line array. With a peak SPL of 130dB peak, it is also very powerful — a 12-box array will throw beyond 35 metres (115ft) and produce live music at high levels in up to 3000-seat venues. It embodies the very latest acoustic technology in an ultra-compact enclosure and is the ideal system for small-to-medium scale theatres and live music venues, AV events and installations in concert halls, ballrooms and HoW.

A passive 2-way system with an impedance of 16 ohms, it can be driven in blocks of 1, 2, 3 or 4 resolution configuration. With a complement of 2 x 6.5” (165mm) LF drivers and a vertical column of 3 x 1.4” (35mm) aluminium dome HF drivers, the acoustic design of WPM is uniquely innovative. The LF drivers are located in the side walls of the HF horn — an arrangement which would introduce acoustic cavities which would degrade the horizontal dispersion if conventional cone drivers were used. WPM's drivers adopt an elegant solution by having solid moulded diaphragms which match the contours of the horn walls and maintain the continuity of the horn profile. Each LF driver also features a demodulation ring in the neodymium motor system to minimize distortion and maximise mid-band output.

In the triple-driver HF section, each individual HF wavefront is precisely coupled to the horn throat via a short waveguide for faultless 100° horizontal constant directivity coverage.
### Technical Specifications

**TYPE**
Two-way, passive line array element

**FREQUENCY RESPONSE (5)**
76Hz-18kHz ± 3dB

**DRIVERS**

**LF**
2 x 6.5" (165mm) contoured-diaphragm /2" (50mm) edge-wound CCAW voice coil, neodymium magnet drivers, reflex loaded

**HF**
3 x 1.4" (35mm) aluminium dome /1.4" (35mm) voice coil, neodymium magnet compression drivers on constant-directivity waveguide

**SYSTEM AMPLIFIER**
iKON iK81

**SYSTEM RESOLUTION**
1 to 4 enclosures per amplifier channel

**MAXIMUM SPL (9)**
130dB peak (1 cabinet)

**NOMINAL IMPEDANCE**
16 ohms

**DISPERSION**
10º horizontal (-6dB), 125º horizontal (-10dB)

**CROSSOVER**
1.2kHz passive

**ENCLOSURE**
Vertical trapezoid with 5º wall angle.

**FINISH**
Black textured paint

**PROTECTIVE GRILLE**
Black HEX perforated steel

**CONNECTIONS**
2 x NL4 type

**PIN CONNECTIONS (INPUT)**
1+/1-

**FITTINGS**
Integral 3-point rigging system

**DIMENSIONS**
(W) 500mm x (H) 185mm x (D) 377mm
(W) 19.7in x (H) 7.3in x (D) 14.8in

**WEIGHT**
14kg (30.9lbs)

**ACCESSORIES**
Install flying frame
Touring flying frame
Flying Pin

### Notes
1. Measured on-axis in half (2pi) space at 2 metres, then referred to 1 metre.
3. Measured in half (2pi) space at 2 metres with 1 watt input, using band limited pink noise, then referred to 1 metre.
4. Measured in half (2pi) space at 2 metres using band limited pink noise, then referred to 1 metre.
5. Measured on-axis in open (4pi) space at 2 metres, then referred to 1 metre.
6. Measured in open (4pi) space at 2 metres with 1 watt input, using band limited pink noise, then referred to 1 metre.
7. Measured in open (4pi) space at 2 metres using band limited pink noise, then referred to 1 metre.
8. Measured in open (4pi) space at 2 metres using band limited pink noise, then referred to 1 metre.
9. Measured on-axis in open (4pi) space at 2 metres with 2.83V input, using band limited pink noise, then referred to 1 metre.
10. Calculated at 1 metre.

Trade Descriptions Act
Due to Martin Audio's policy of continuing improvement, we reserve the right to alter these specifications without prior notice. Martin Audio is committed to refining state of the art sound reinforcement, combining in-depth product and field applications research with advanced manufacturing techniques. Every Martin Audio product is built to the highest manufacturing standards and rigorously tested to ensure that it meets the performance criteria specified in the design.
WPM
Optimised Line Array – Two-way, passive line array element

SPL Comparisons Vs Competitors

- The core measurement of SPL is measured differently by manufacturers.
- Simply put, many competitors now quote figures based upon a crest factor of 4 (12dB peak vs continuous) and often use the highest sensitivity frequency band (typically HF) to derive their figures given that at LF, where the most power is required, even large amplifiers can’t swing twice the peak output volts demanded by a doubling in crest factor from 2 to 4.
- Martin Audio quotes the AES industry standard crest factor of 2 (6dB peak vs continuous) and we ensure our partnering amplifiers are capable of delivering the volts and power to achieve our specs.
- Therefore, if people reading specifications do not understand how SPL is measured and the implications it would appear incorrectly that some competitors have significantly higher SPL.
- While absolute comparable data is not available, some element of logic can be applied for the following products to bring a more realistic comparison.
