

VU-NET 2.3.1 Release - July 2024

The latest release of VU-NET implements new features for iKON amplifiers

Latest Firmware Version

Please ensure all devices are running the latest firmware version (released August 2024).

- iKON Firmware version – **1.680**

iK41

- Added support for the iK41 Amplifier - Firmware 1.680 required

New fall-over features

PLEASE NOTE THE NEW FALL-OVER FEATURES REQUIRE THE IKON AMPS TO BE UPGRADED TO FW V1.680

- Added additional fall-over options for Dante digital black detection and additional fall-back behaviours.

Users now have the option to choose from the following fallback options:

"Auto": The default behaviour functions similarly to the old default setting, falling back instantaneously when the higher priority audio source is detected.

"Delayed": Will fall back after 5 minutes if a higher priority signal is detected.

"Latch": Will not fall back unless the user manually selects the audio source after it has fallen over

These features are currently disabled for DX4.0 until the updated firmware is available.

Presets

- Updated presets for FP stage monitors
- Updated presets for SX118, SX218, SXC118, SXH218
- HPF now adjustable for LE & XE monitors
- WPM/MLAM Frontfill & Pole Mount presets no longer locks the input DSP channels

Bug fixes

- Fixed an issue where certain fall-over options weren't ganged when using more than one amplifier
